

Satellite owners share ground G0

Insert $C=\{a1,a2\}$; extra release $E=\{\}$

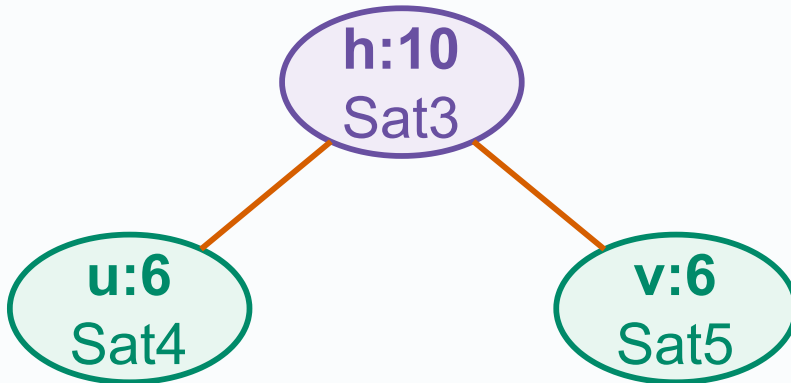

Removed $D=S$

$s1:4, s2:4$

Fixed $B=C$

$a1:1, a2:1; q=-6$

G[R]: shared ground G0

Gain= q +recovery

Sum (infeasible)

$$-6+22=16$$

Executed warm W

$$-6+10=4$$

Joint optimum

$$-6+12=6$$

Alternative $C'=\{b,a2\}$: feasible gain +8

Solid edge: conflict; u and v are compatible
